

2024 Annual Shoreland Activities Survey

The DNR Shoreland Management Program would like to thank all county staff for their continuing dedication in administering their county's shoreland regulations. Your continued efforts are critical to the protection of our state's water resources. We would also like to thank staff for taking the time at the end of each year to fill out the annual Shoreland Activities Survey.

Directions:

Please answer the following questions for your county's 2024 shoreland activities. Following are tips for navigating the Qualtrics survey:

- You must answer all required questions before you can move to the next page.
- You can leave a partially completed survey and return to it later by copying the URL and re-posting it in a browser.
- No information is saved unless you click the **Right Arrow** button at the bottom. Even if you complete a page the information will not be saved until you advance to the next page.
- **Once you complete the last page, the survey is saved and the DNR will receive your responses. You will also have the option to download a pdf of your completed survey.**
- The DNR will send you a PDF copy of your survey when the survey is closed.

- To receive a shoreland grant in 2025, a completed survey must be received by **February 1, 2025**.
- If you have any questions, please contact:

Kathleen Metzker, DNR Land Use Hydrologist
500 Lafayette Road St. Paul, MN 55155-4032

Select Your County

Rock 

2024 Shoreland Block Grant Amount (\$)

3570.00

List the number of shoreland variance approvals in 2024 (if zero, please enter '0' in the box):

OHWL setback: 0

Of these, how many were in the SIZ? 0

Bluff setback: 0

Of these, how many were in the BIZ? 0

Septic System Setback: 0

Impervious coverage: 0

Building Height: 0

Did your county approve any subdivisions (with or without variances) in shoreland areas in 2024 where the lots did not meet the lot area and width standards?

Yes

No

Did you typically require conditions of approval on variances approved in 2024?

- Yes
- No
- Did not approve any variances in 2024**

For approximately how many variance inquiries in 2024 were alternative solutions found (thus reducing the actual number of variance applications)?

- All**
- Most
- About half
- Hardly any
- None

What approaches were most effective in helping owners pursue alternative solutions?

Since we do not have any subdivisions in Shoreland and most of our shoreland areas are not developed, it is rare that we have such issues. Since the properties are large and undeveloped, moving to a place outside of Shoreland has been a very typical approach. We work with the developer and consult with DNR staff to find solutions.

Does your county require septic system compliance (system upgrades) whenever a variance or permit of any kind is granted?

Yes

No

What were the total number of lots created in shoreland areas in each of the following categories in 2024?

Shoreland PUD: 0

Standard lot and block subdivision: 0

Lot splits (administrative subdivision): 0

In 2024, how many land use permits did your county issue for new construction on previously undeveloped lots in shoreland areas:

0

In 2024, how many land use permits did your county issue in shoreland areas for redevelopment (e.g., expansion of structures, substantial improvements, new structures added to developed lots):

2

How many permits for grading and filling within the SIZ, BIZ, and steep slopes were issued in 2024?

0

To what extent do you think grading and filling activities took place within the SIZ, BIZ, and steep slopes with a permit vs. done without a permit?

Minimal and probably none occurred.

Does your county generally inspect work being done in shoreland?

Yes

No

If so, how does your county inspect the work? Check all that apply.

- on-site inspection prior to construction**
- on-site inspection during construction**
- on-site inspection after construction**
- as-built drawings and measurements required after construction
- other

Have any townships in your county taken on shoreland and/or floodplain zoning administration in 2024? If yes, please list the township(s) and describe any cooperative agreements between your county and those township(s):

0

Are you aware of any townships in your county which intend to take on shoreland and/or floodplain zoning administration in 2025? If yes, please list the township(s):

No

What shoreland-related trainings, guidance, or tools do your staff or Board of Adjustment need?

Not aware of any needs at this time. In the rare circumstances we have a proposal in Shoreland, we work the proposer and consult with DNR staff.

Did your county pursue or consider pursuing any efforts to reduce impacts from or adapt to changing climate conditions? Efforts could include education and outreach, zoning changes, partnerships, or other special initiatives, in 2024? If yes, please describe. If it was a zoning change, please cite the provision:

No formal efforts have taken place, but we do take a concerted effort to take climate change into consideration in our work.

If you have any additional questions or comments on any shoreland-related issues, please enter them here:

Riprap

There is growing concern about the increasing loss of natural shorelines and the proliferation of riprap across the state.

Answering the following questions will help us understand the county administrative perspective and tee up discussion at a future LGU forum or more formally with MACPZA, if there is interest.

Does your ordinance require a permit for riprap installation?

yes

no

Would any of the following prep work related to riprap installations require a permit? (select all that apply):

- Land alteration exceeding 10 cubic yards above the OHWL**
- A crushed rock or gravel filter exceeding 10 cubic yards placed underneath riprap**
- Vegetation removal**
- We have no permits for riprap-related work**
- Other

When someone asks about riprap projects at or below the Ordinary High Water Level (OHWL), what information do you give them (select all that apply)?

- DNR contact information (i.e., Aquatic Plant Management specialist, Area Hydrologist, Wildlife contact, etc.).**
- Tell them there are no local permits or requirements.
- Tell them about local permit requirements.
- Tell them that no DNR permit is required if there is a demonstrated need to stop existing erosion or to restore an eroded shoreline and they follow the conditions on the DNR Riprap factsheet.
- Give them the DNR riprap factsheet.**
- Other.

Does the fact that the DNR allows riprap to be installed without a permit below the OHWL in certain situations affect your ability to protect shoreland resources? If so, please explain.

No

Overall, how often do you think riprap is installed when there isn't a significant erosion problem or for situations where vegetative solutions would work?

- Very often
- Often
- Not often**

In what situations do you see unnecessary installation of riprap? Please explain with examples, if possible.

What are the biggest contributing factors to the unnecessary installation of riprap? **Select three.**

- Insufficient local requirements.**
- Insufficient DNR requirements.
- Lack of staff administrative and/or enforcement capacity.
- Lack of DNR area hydrologist capacity to review projects below the OHWL.
- Lack of education on the importance of natural shorelines.**
- Lack of resources to provide landowners and contractors for alternative solutions.**
- Other.

What suggestions do you have for limiting the number of unnecessary riprap installations? (select three)

- Better define the level of existing shoreline erosion needed before riprap is allowed as an erosion control measure.
- Better define methods to demonstrate or prove that a specified level of existing erosion exists.**
- Training for LGUs and contractors on what constitutes erosion and best practices for design and installation of riprap.
- Require permits for all riprap from the DNR.**
- Require permits for all riprap from the local government.**
- None-there are no concerns with current state and local riprap standards.
- Other
